CRO Audit *Report*

End-to-end Mobile Experience Audit

*Homepage • Navigation • Product Detail Page • Cart • Checkout**Prepared for Founder / CEO Review*

KEMI GHETIA

CRO SPECIALIST

AUGUST 2026

36 ISSUES IDENTIFIED

Executive Summary

Ranavat's brand storytelling, product photography, and premium positioning are strong — the gap is in funnel execution. Across Homepage, PDP, Cart, and Checkout, this audit identifies **36 issues**, of which approximately **60% are low-effort, dev-only fixes** (broken links, missing CTAs, misplaced trust signals) capable of shipping within a single sprint while delivering outsized conversion impact.

Three issues represent revenue leaks occurring today: a dead-end “Shop All” page, an irrelevant search experience on high-intent queries, and press-referral traffic (Vogue, Bazaar, Goop, Bustle) landing on inconsistent product pages — each is losing pre-qualified, high-intent visitors before they ever reach a considered purchase decision.

The single largest lever is **checkout simplification**. The address and sign-up flow is structurally heavy and is the most probable primary drop-off stage in the funnel; reducing it to **two-to-three guided steps** should be the top investment priority — ahead of any homepage redesign work.

The second-largest lever is **average order value**, not conversion rate alone. Routine-building cross-sells, the “Save with Sets” relocation to cart, and free-gift threshold nudges are all currently absent or misplaced — meaning every conversion happening today is leaving basket size on the table.

Net framing: this is not a “redesign the website” ask. It is a prioritized, mostly low-dev-cost punch list. Fixing the top eight to ten items (urgent and high-impact) should move bounce rate, checkout completion, CVR and AOV simultaneously within one to two release cycles.

Audit Scope & Methodology

This audit was conducted on the **mobile experience of ranavat.com**, tracing the **complete purchase funnel: Homepage → Navigation & Search → Product Detail Page → Cart Drawer → Checkout → Footer/Site-wide**. Each observation is evaluated against **established CRO and behavioral-psychology principles, (LIFT & FOGG BEHAVIOUR MODEL)**— including **friction reduction, anchoring, the default effect, loss aversion, choice overload, goal-gradient effect, and social proof placement** — rather than aesthetic preference alone.

Each issue below is structured in parts: **the gap identified**, the **CRO or behavioral principle it violates or underleverages**, the specific **recommendation**, the underlying **reasoning**, and the **effort level** plus the **primary, secondary, guardrail, or revenue metric** expected to move as a result.

Audit Impact Snapshot

The issues most critical to address first, and why — full detail for every item follows in the sections after.

Priority	Issue	Why First
URGENT	“Shop All” dead-end page – collection empty	Direct revenue leak; zero-effort fix
URGENT	Search irrelevance on product queries	Kills highest-intent traffic
HIGH	Checkout address / sign-up friction	Likely largest single CVR lever
HIGH	No Add-to-Cart above the fold on PDP	Core funnel entry point
MEDIUM	Homepage redundancy and discovery gaps	Compounds across all traffic sources
MEDIUM	Cart drawer trust and upsell gaps	AOV and abandonment lever

Funnel Coverage

Homepage	Navigation & Search	PDP	Cart & Checkout	Footer
----------	---------------------	-----	-----------------	--------

Each observation is evaluated against established CRO and behavioral-psychology principles — anchoring, the default effect, loss aversion, choice overload, the goal-gradient effect, and social proof placement — named explicitly against every issue below.

NOTE: Please refer to attached images/screenshots at the bottom of the document, indexed with issues identified for easy reference.

ISSUES 01–26

Core Funnel Issues

Homepage, product detail page, and navigation & search — the discovery and value proposition stages of the funnel.

01 - HOMEPAGE

01

Sequential Pop-Up Overload

Friction Reduction (Progressive Disclosure)

STRUCTURAL FIX

ACTION · Effort: Dev / UX — Low

Gap: Sequential email pop-ups — a newsletter sign-up followed immediately by an AI-bot prompt asking for email — both fire before any product value is shown.

Fix: Trigger only one pop-up per session; delay it by scroll-depth (around 50%) or exit-intent instead of firing on page load. Merge the AI-bot email capture into a later, more engaged moment rather than entry.

IMPACT

Primary: Bounce rate (down), Homepage engagement rate (up). Guardrail: Email capture rate (monitor for drop).

VALUE Two consecutive interruptions before value is demonstrated create high early bounce risk. This violates the core CRO principle of reducing friction before first value is delivered.

02

Hero CTA Buried Above the Fold

Above-the-Fold Visibility (Fitts's Law)

QUICK WIN

ACTION · Effort: UX / Design — Low

Gap: The hero banner sits above the fold but has no clear, prominent “Shop Now” CTA — the call to action is buried within text.

Fix: Add a single, high-contrast “Shop Now” CTA above the fold, visually separated from the animated banner link.

IMPACT

Primary: Homepage-to-PLP click-through rate (up).
Revenue: Sessions entering the funnel (up).

VALUE CTA visibility above the fold is one of the highest-leverage levers for entry-point conversion. A buried or implied CTA fails to capture ready-to-browse intent.

03

Discount Slider Hidden on Scroll

Urgency & Loss Aversion

QUICK WIN

ACTION · Effort: Dev — Low

Gap: The dynamic discount slider is overridden and hidden by the sticky navigation bar as the user scrolls down.

Fix: Convert the discount messaging into a persistent, collapsible sticky strip, or reposition it so the navigation bar does not cover it on scroll.

IMPACT

Primary: Conversion rate (up). Secondary: AOV, if the discount is tiered.

VALUE Discount visibility is a live urgency and loss-aversion nudge. Hiding it post-scroll removes a conversion lever the brand has already invested in creating.

04

Single-SKU Hero Limits Discovery

Choice Architecture (Discoverability)

STRUCTURAL FIX

ACTION · Effort: Content / Dev — Medium

IMPACT

Gap: The animated hero banner links to a single SKU (Firming Bakuchi Serum) only. This works if the goal is to spotlight one product, but it limits product discovery for all other visitors.

Fix: Rotate three to four banners across bestsellers, categories, and new launches, retaining the single-SKU spotlight as one slot within the rotation rather than the only path.

Primary: Product discovery rate (PLP sessions per user, up).
Secondary: Category-wide conversion rate.

VALUE *A single-destination hero caps the breadth of product discovery, reducing basket diversity and repeat exposure to the wider catalogue.*

05

Duplicate Bestsellers, No Category Path

Redundancy, Hesitation & Clarity

STRUCTURAL FIX

ACTION · Effort: Content / UX — Medium

Gap: “Shop Our Bestsellers” appears twice on the homepage, a poor use of scroll real estate. There is no dedicated section for new launches, and no categorized way (skin / hair / fragrance / sets) to explore the full product range.

Fix: Consolidate to a single bestseller grid. Add a rotating “Spotlight” module beneath it (seasonal or festive), a category carousel (Skin / Hair / Fragrance / Sets), and a dedicated “New Arrivals” rail.

IMPACT

Primary: Category page sessions (up), time-to-first-PDP (down). Secondary: New launch sell-through.

VALUE *Redundant modules carry a real opportunity cost in scroll space. Without a category or new-launch path, users — especially first-time visitors — have no guided sense of where to start.*

06

Text-Heavy Homepage, Inconsistent Spacing

Cognitive Load Reduction

ENHANCEMENT

ACTION · Effort: UX / Design — Medium

Gap: The homepage is text-heavy on mobile with inconsistent spacing and section alignment.

Fix: Convert descriptive text blocks into icon or visual modules; standardize section padding and margins through a design system.

IMPACT

Secondary: Scroll depth (up), qualitative time-on-page.
Guardrail: Page load speed.

VALUE *Dense text increases cognitive load on mobile. Inconsistent spacing reads as unpolished and can undercut the trust signal that a premium price point depends on (the halo effect of visual craft).*

07

Press-Referral PDP Inconsistency

Trust Continuity (Consistency Principle)

STRUCTURAL FIX

ACTION · Effort: Dev / UX — Medium

Gap: Press logos (Vogue, Bazaar, Goop, Bustle) redirect to specific SKUs, but the destination pages use inconsistent PDP layouts — for example, the Bustle link lands on a sunscreen PDP with an entirely different design and layout from the rest of the catalogue.

Fix: Standardize the PDP template across all SKUs, and route each press mention to the exact SKU or section it references, using the same consistent layout.

IMPACT

Primary: Press-referral conversion rate (up). Guardrail: Press-referral bounce rate (down).

VALUE This is one of the highest-credibility referral sources on the site. An inconsistent destination breaks trust continuity at exactly the moment a visitor is most primed to convert — this is a leak, not a conversion.

02 – PRODUCT DETAIL PAGE

08

No Add-to-Cart above the fold

Proximity of Action (Fitts's Law)

QUICK WIN

ACTION · Effort: Dev — Low

Gap: There is no Add-to-Cart CTA above the fold on the product detail page.

Fix: Introduce a sticky Add-to-Cart bar visible immediately, showing product image, name, and price.

IMPACT

Primary: PDP-to-Add-to-Cart rate (up). Revenue: Direct.

VALUE Forcing a scroll before the primary action is available introduces friction at the point closest to purchase. Every additional scroll before a core action compounds drop-off risk.

09

Award Badge Buried Below Fold

Social Proof

QUICK WIN

ACTION · Effort: Content / Dev — Low

Gap: Award-winning and bestseller badges are buried at the second scroll rather than shown above the fold.

Fix: Move award and credibility badges into the hero image zone, above the fold.

IMPACT

Primary: PDP conversion rate (up).

VALUE Award status is a trust shortcut that buyers scan for early. Burying it wastes a zero-cost, high-value conversion signal.

10

Weak Product Title Value-Prop

Top-of-Mind Recall / Value Proposition Clarity

ENHANCEMENT

ACTION · Effort: Content — Low

Gap: The product title is not visible above the fold and does not clearly communicate a value proposition.

Fix: Shorten titles to product name plus a core benefit (for example, “Bakuchi Firming Serum — Retinol Alternative”), and keep the title visible above the fold at all times.

IMPACT

Secondary: Branded search recall, repeat purchase rate.

VALUE The title functions as a top-of-mind recall anchor. Benefit-forward naming improves recall in future search and repeat-purchase intent, addressing buyer psychology directly rather than relying on description alone.

11

Star Rating Not Linked to Reviews

Social Proof Accessibility

QUICK WIN

ACTION · Effort: Dev — Low

Gap: Star ratings and review counts appear near the product image but do not link or scroll down to the review section itself.

Fix: Make the star rating clickable, anchor-scrolling directly to the reviews section.

IMPACT

Primary: Review-section engagement (up), PDP conversion rate (up).

VALUE Reviews are the highest-credibility, highest-trust touchpoint buyers reference before purchasing. A broken affordance here loses social proof engagement at the exact moment of decision.

12

Ingredient Carousel Poorly Sequenced

Progressive Disclosure / Information Hierarchy

STRUCTURAL FIX

ACTION · Effort: Content / UX — Medium

Gap: The key ingredients section, which is highly visual and well received, appears too far down the page. The image carousel is not organized in a clear priority order.

Fix: Reorder the carousel: product and value-proposition images first, then before-and-after images, then routine or AM/PM usage. Move key ingredients earlier, into the first scroll.

IMPACT

Primary: PDP engagement (up). Secondary: Time-to-add-to-cart (down).

VALUE Ingredient trust is part of the buyer's initial evaluation of the product, not a secondary detail — it belongs at the front of the decision journey, not buried after it.

13

Duplicate “Pair It With” & Ingredients

Clarity Over Complexity (Hick's Law)

QUICK WIN

ACTION · Effort: Dev / Content — Low

Gap: The “Pair It With” section and the ingredient section each appear twice on the same PDP.

Fix: Remove the duplication; retain a single instance of each section.

IMPACT

Guardrail: PDP bounce rate (down). Secondary: Time-to-decision (down).

VALUE Repetition on a decision-stage page reads as anxiety-inducing distraction rather than reinforcement, and hurts the overall clarity of page hierarchy.

14

FAQ Positioned Too Early

Objection-Handling Sequencing

QUICK WIN

ACTION · Effort: Dev — Low

Gap: The FAQ section is positioned high on the PDP, ahead of content more relevant to early-stage interest.

Fix: Move FAQs to the bottom of the PDP, after reviews and before the footer.

IMPACT

Secondary: Time-to-add-to-cart (down).

VALUE FAQs serve a late-stage objection-handling purpose; placing them early increases the time and effort required to reach the purchase decision rather than reducing it.

15

No Routine Cross-Sell CTA

Cross-Sell / AOV Optimization

STRUCTURAL FIX

ACTION · Effort: Dev / Content — Medium

Gap: There is no cross-sell or routine-building Add-to-Cart touchpoint at key moments on the PDP. “Your Ritual” is well designed visually but does not let users add the full routine to cart with price.

Fix: Add a “Complete Your Routine” module with a multi-item Add-to-Cart action, placed mid-PDP and echoed in the cart drawer.

IMPACT

Revenue: AOV (up). Primary: Units per order (up).

VALUE A missing upsell and cross-sell touchpoint at a high-intent zone is a direct lost opportunity for average order value. Routine-based selling also matches how skincare purchase decisions are naturally made.

16

Text-Only Trust Signals

Pre-Attentive Visual Processing

STRUCTURAL FIX

ACTION · Effort: UX / Design — Medium

Gap: Product descriptions are text-heavy, and trust signals such as “cruelty-free” are presented as text rather than recognizable visual icons.

Fix: Convert trust signals into a visual icon strip near the Add-to-Cart button. Convert “How to Use,” “Product Details,” and “Skin Type” text dropdowns into visual cards.

IMPACT

Primary: PDP conversion rate (up). Guardrail: Bounce rate.

VALUE Icons are processed faster than text. Placing trust badges near the CTA reduces last-mile hesitation at the exact point of decision.

17

No MRP Anchor or Default Size

Anchoring Effect & Default Effect

QUICK WIN

ACTION · Effort: Dev / Content — Low

Gap: Size options do not display MRP alongside the selling price and discount, and no size or variant is pre-selected by default.

Fix: Show MRP struck through alongside the selling price and discount percentage. Pre-select the size or variant the business wants to prioritize by default.

IMPACT

Revenue: AOV (up). Primary: Conversion rate (up).

VALUE Displaying MRP invokes the anchoring principle, making the discount magnitude explicit. Pre-selecting a variant applies the default effect, nudging users toward the preferred SKU without requiring an extra click.

18

Choice Overload: Sets + Pairs Combined

Choice Overload / Decision Paralysis (Hick's Law)

STRUCTURAL FIX

ACTION · Effort: Dev / UX — Medium

Gap: “Save with Sets” and “Pairs Well With” are grouped together on the PDP, presenting too many simultaneous choices at once.

Fix: Move “Save with Sets” to the cart drawer or checkout as an upsell. Keep “Pairs Well With” on the PDP, but limit it to one or two SKUs at most.

IMPACT

Primary: PDP conversion rate (up). Revenue: Cart AOV (up), via relocated upsell.

VALUE Too many simultaneous options at the primary decision stage reduces conversion. Sets are better suited to the cart stage, where the user has already committed to purchase.

19

Clinical Claims Underleveraged

Social Proof / Risk Reversal

QUICK WIN

ACTION · Effort: Content / Dev — Low

Gap: Clinically proven results and quantified claims are underleveraged in their placement further down the page.

Fix: Place clinical proof points directly below the Add-to-Cart button and size selector, ahead of the full description.

IMPACT

Primary: PDP conversion rate (up).

VALUE This is a high-trust signal that resolves hesitation precisely at the decision point. Its current placement wastes its persuasive value.

20

Static Redirect Banners, No Links

Internal Linking Equity (SEO Wayfinding)

ENHANCEMENT

ACTION · Effort: Dev — Low

Gap: Redirect UGC banners lower on the PDP use static text pop-ups instead of linking to relevant collection pages.

Fix: Convert these into clickable images that link directly to the relevant collection pages and ATC CTAs.

IMPACT

Secondary: Organic traffic (SEO), category page sessions (up), ATC rate.

VALUE The missed internal linking opportunity affects both SEO crawl equity and on-site product navigation and discovery.

21

Chatbot Overlaps Accessibility Icon

Interface Friction / Accessibility Compliance

QUICK WIN

ACTION · Effort: Dev — Low

Gap: The AI chatbot icon overlaps with the accessibility icon on the PDP.

Fix: Reposition the chatbot icon, or add a user-dismiss (close) option so visitors can remove it.

IMPACT

Guardrail: Accessibility compliance, frustration signals such as rage clicks (down).

VALUE Overlapping interface elements create friction and an accessibility compliance risk. Giving users control over non-essential UI improves the perceived polish of the site.

03 - NAVIGATION/ MEGAMENU & SEARCH

22

Search Returns Irrelevant Results

Intent Matching / Search Relevance

QUICK WIN

ACTION · Effort: Dev — Medium-High

Gap: Search returns irrelevant results for clear product queries — for example, searching “sunscreen heat” surfaces a blog post about perimenopause, with an unrelated image.

Fix: Fix search indexing and relevance weighting; prioritize PDP and PLP results over blog content for product-intent queries, and add type-ahead / autosuggest functionality.

IMPACT

Primary: Search-to-PDP click-through rate (up), search exit rate (down). Revenue: Search-driven conversion (up).

VALUE Search represents the strongest purchase-intent signal on the site. A broken search experience sends a high-intent visitor to a dead end — this is one of the most severe leaks identified in this audit.

23

Quiz Invisible, Routine Too Long

Zero-User Data Capture / Overwhelm Reduction

STRUCTURAL FIX

ACTION · Effort: UX / Content — Medium

Gap: The “Take the Quiz” entry point is effectively invisible within the navigation menu, and the quiz itself recommends longer routines that risk overwhelming users.

Fix: Feature the quiz as a dedicated homepage module rather than a nav-only link. Simplify the quiz to first ask

IMPACT

Primary: Quiz completion rate (up), quiz-to-conversion rate (up). Secondary: User data volume for email / CRM.

how many steps the user wants, then recommend two, three, or four SKUs accordingly, rather than a longer routine by default (**Personalization**).

VALUE The quiz is an existing but unused source of organic, user data and a personalization engine. A shorter, guided output reduces overwhelm and abandonment compared to a long-recommended routine.

24

Blog CTA Missing Direct ATC

Friction Reduction (Fewer Clicks-to-Conversion)

ENHANCEMENT

ACTION · Effort: Dev / Content — Low

Gap: Blog posts include SKU CTAs (for example, “Shop Saffron”), but these redirect to a collection or PLP page rather than allowing a direct add-to-cart action.

Fix: Add a direct Add-to-Cart CTA within blog content, rather than routing through a collection page.

IMPACT

Primary: Blog-to-Add-to-Cart conversion (up). Guardrail: Blog bounce rate.

VALUE Blog readers arrive via search with lower initial purchase intent and a higher bounce risk. Reducing the number of clicks required to reach cart captures intent before it decays.

25

No Discovery / Mini-Size Entry

Risk Reversal / Low-Commitment Entry

ENHANCEMENT

ACTION · Effort: Content / Dev — Low

Gap: Discovery or mini-size products are not featured anywhere in the navigation.

Fix: Add a dedicated “Minis / Discovery Set” entry in the navigation, positioned as trial-size products or a limited discount offer.

IMPACT

Primary: New customer acquisition rate (up). Secondary: Trial-to-full-size repeat purchase rate.

VALUE A lower price-point entry point reduces the perceived risk of a first purchase and serves as a useful acquisition and trial mechanism, particularly for a premium-positioned brand.

26

“Shop All” Dead-End Page

Critical Path Integrity

QUICK WIN

ACTION · Effort: Dev — Low (urgent priority)

Gap: “Shop All” in the mega-menu leads to an empty, dead-end empty collection page, and the “Continue Shopping” CTA does not route back into a functioning PLP.

Fix: Urgent fix: populate the “Shop All” collection or redirect it to a functioning PLP, and correct “Continue Shopping” to route to a live PLP rather than the homepage.

IMPACT

Primary: “Shop All” conversion rate, currently near zero, recovered. Guardrail: Site-wide bounce rate.

VALUE This is a critical, blocking bug representing a direct revenue leak with no recovery path for the user — it should be treated as the single highest-priority fix in this audit.

ISSUES 27–36

Transaction & Retention (Bottom of the Funnel – Critical)

Cart drawer, checkout, and site-wide trust elements — the conversion and retention stages of the funnel.

04 - CART DRAWER / CHECKOUT

27

No Trust Signals in Cart Drawer

Trust Signals at the Decision Point

STRUCTURAL FIX

ACTION · Effort: Dev / UX — Medium

Gap: The cart drawer has no trust badges, visible offers, or a clear order summary detail.

Fix: Add a secure-checkout badge, clearly visible applicable offers or coupons, an itemized order summary, and item count.

IMPACT

Primary: Cart-to-checkout rate (up). Guardrail: Cart abandonment rate (down).

VALUE The cart is the last-mile trust-reinforcement stage of the funnel. Its absence leaves hesitation unresolved right before the user would otherwise proceed.

28

No Urgency / Milestone Mechanic

Goal-Gradient Effect

STRUCTURAL FIX

ACTION · Effort: Dev — Medium

Gap: There is no urgency or milestone mechanic in the cart, such as a free-gift threshold or countdown timer.

Fix: Add a progress indicator toward a free-gift or free-shipping threshold (for example, “₹X away from a free gift”).

IMPACT

Revenue: AOV (up). Primary: Cart completion rate (up).

VALUE Visible progress toward a reward increases both average cart value and the motivation to complete the purchase as the user nears the goal.

29

Ritual Cross-Sell Missing ATC

Frictionless Upsell

STRUCTURAL FIX

ACTION · Effort: Dev — Medium

Gap: The “Complete Your Ritual” cross-sell is present in the cart drawer but is missing an Add-to-Cart action on each item.

Fix: Convert this into a slider with a direct Add-to-Cart action per item.

IMPACT

Revenue: AOV (up), units per transaction (up).

VALUE This reduces friction at the highest-intent stage of the funnel — the user is already in cart — making it the ideal moment for a one-click upsell.

30

Checkout CTA Lacks Trust Signals

Risk Mitigation / Trust Signals

QUICK WIN

ACTION · Effort: Dev — Low

Gap: The checkout CTA carries no trust signals, such as secure-checkout messaging.

IMPACT

Guardrail: Checkout abandonment rate (down).

Fix: Add SSL / secure-checkout badges and shipping or refund icons near the checkout CTA.

VALUE *This final-step trust reinforcement reduces last-second drop-off, particularly for new or first-time buyers still resolving hesitation.*

31 High-Effort Address / Sign-Up Flow

Friction Reduction (Checkout Optimization)

STRUCTURAL FIX

ACTION · Effort: Dev — High

Gap: The address entry and sign-up flow at checkout is high-effort and is likely the single highest drop-off stage in the funnel.

Fix: Reduce checkout to two or three guided steps; enable guest checkout, address auto-fill or detection, and social or OTP-based login.

IMPACT

Primary: Checkout completion rate (up, largest expected lift). Revenue: Direct.

VALUE *Every additional form field or step compounds drop-off along the classic checkout friction curve. This is likely the single largest conversion lever available on the entire site.*

32 No Prepaid / COD Fee Messaging

Loss Aversion

STRUCTURAL FIX

ACTION · Effort: Content / Dev — Low

Gap: There is no prepaid incentive messaging and no visible extra fee for Cash on Delivery at the payment step.

Fix: Add a “Save ₹X with Prepaid” banner, and clearly display the additional fee applied to Cash on Delivery orders.

IMPACT

Secondary: Prepaid payment mix (up). Guardrail: RTO / COD-related losses (down).

VALUE *Framing the choice as a loss (losing a discount by choosing COD) is more persuasive than presenting a plain prepaid discount.*

33 Policy Info Missing at Checkout

Transparency / Trust

QUICK WIN

ACTION · Effort: Content / Dev — Low

Gap: Shipping and refund policy information is not visible at checkout, and the free-shipping threshold is not clearly communicated.

Fix: Add compact policy icons or links (shipping, refund, secure payment) directly at checkout, and clearly state the free-shipping threshold (for example, “Free shipping above ₹15,000”).

IMPACT

Guardrail: Checkout abandonment rate (down).

VALUE *Policy transparency at the decision point reduces abandonment caused by unresolved logistics questions, which otherwise surface as hesitation at the final step & support queries.*

34 Empty Cart Has No Recovery CTA

Funnel Recovery

QUICK WIN

ACTION · Effort: Dev — Low

IMPACT

Secondary: Recovered sessions routed back to PLP.

Gap: The empty cart state has no “Shop Now” or similar CTA to redirect the user back into the funnel.

Fix: Add a “Shop Now” or bestsellers redirect CTA on the empty cart state.

VALUE A dead-end state is a lost recovery opportunity for a user who is already active in-session.

35

Gift Card Not in Checkout Flow

Retention / Referral Loop

ENHANCEMENT

ACTION · Effort: Dev — Medium

Gap: The e-gift card option is not integrated into the cart or checkout flow rather is buried in megamenu.

Fix: Surface the e-gift card option at cart or checkout as a retention and gifting mechanism.

IMPACT

Secondary: Repeat purchase rate, new customer acquisition via gift recipients.

VALUE Gift cards support repeat visits and referral-driven acquisition, since the recipient of a gift card becomes a new customer.

05 - FOOTER / SITE-WIDE

36

Policies Missing from Footer

Trust Before Commitment

QUICK WIN

ACTION · Effort: Dev / Content — Low

Gap: Refund, shipping, cancellation, privacy, and terms-of-service policies are only accessible at checkout, not from the site footer.

Fix: Add full policy links to the footer, accessible from every page across the site.

IMPACT

Guardrail: Trust and compliance. Secondary: Pre-purchase support ticket volume (down).

VALUE Pre-purchase trust-building requires policy access before checkout is reached, not only at the final step — this supports both CRO best practice and general compliance expectations.

SEQUENCING

Roadmap & Prioritization (ICE Framework)

All 36 issues sequenced into three implementation horizons. No item is omitted — this groups the same 36 issues above by when to act, not what to do.

NOW (P0 PRIORITY): QUICK WINS (0-2 WEEKS)

Low effort, high or urgent impact. Zero-to-low dev cost, no content dependency — each item fixes an active leak or friction point. Expected to move bounce rate, checkout completion, and PDP conversion rate within one sprint.

#	Item	Section
26	Fix “Shop All” dead-end page	Navigation
22	Fix search irrelevance	Navigation
8	Add sticky Add-to-Cart above the fold	PDP
9	Move award badge above the fold	PDP
11	Fix star rating deep-link to reviews	PDP
13	Remove duplicate sections	PDP
14	Move FAQ to bottom of PDP	PDP
17	Add MRP/SP anchoring and default size	PDP
19	Reposition clinical claims below CTA	PDP
21	Fix chatbot / accessibility icon overlap	PDP
2	Add clear “Shop Now” CTA above the fold	Homepage
3	Fix discount slider hidden on scroll	Homepage
30	Add trust badges near checkout CTA	Checkout
33	Add shipping/refund visibility at checkout	Checkout
34	Add “Shop Now” CTA on empty cart	Cart
36	Add policy links to footer	Footer

NEXT (P1 PRIORITY): STRUCTURAL FIXES (2-6 WEEKS)

Medium effort, high impact. Requires design and dev coordination plus content restructuring, and directly targets AOV and mid-funnel drop-off. Should follow the Now-bucket fixes so gains are not masked by unresolved leaks.

#	Item	Section
31	Simplify checkout address/sign-up flow	Checkout
1	Fix sequential pop-up sequencing	Homepage
4	Rotate hero banners across categories	Homepage
5	Consolidate bestsellers, add category carousel	Homepage
7	Standardize PDP template across all SKUs	Homepage / PDP
12	Reorder PDP carousel content priority	PDP
15	Add “Complete Your Routine” cross-sell	PDP
16	Convert trust badges/dropdowns to visual cards	PDP
18	Relocate “Save with Sets”; limit “Pairs Well With”	PDP
23	Rebuild quiz as homepage module	Navigation
27	Add trust badges, offers, summary to cart drawer	Cart

#	Item	Section
28	Add free-gift / shipping threshold progress bar	Cart
29	Convert “Complete Your Ritual” to slider with ATC	Cart
32	Add prepaid savings / COD fee messaging	Checkout

LATER (P2 PRIORITY): ENHANCEMENT (6-12 WEEKS)

Medium-to-high effort, compounding impact. Higher creative and content lift with longer build cycles — design system work, SEO restructuring, new product-line placement — and more retention-oriented than immediately conversion-oriented. Best sequenced once funnel fixes are already showing measurable lift.

#	Item	Section
6	Full homepage text-to-visual conversion, spacing system	Homepage
10	Product title rework for value-prop and recall	PDP
20	Convert static redirect banners to collection links	PDP
24	Add direct ATC CTA within blog content & separate ‘blog’ in megamenu	Navigation
25	Add discovery / mini-size line to checkout	Checkout
35	Integrate e-gift card into checkout	Checkout

This roadmap accounts for all 36 items identified in this audit without omission, sequenced to deliver the highest-confidence, lowest-effort wins first, followed by structural funnel fixes, and closing with longer-cycle enhancement and retention work.
